

FA-8 Floor Abrader

- Operate with or against grain
- Cost effective - no more chemicals
- Re-coats all factory-finished floors
- Extremely comfortable to use
- Strips without altering floor

For superior dust collection, combine the FA-8 with a Clarke American Sanders dust control vacuum.

Because Pride Still Matters.

Change The Way You Think About Re-Coating Floors.

With over a century of experience manufacturing powered floor sanding equipment, Clarke American Sanders has once again developed an innovative and new offering to the pre-finished and wood floor sanding industry. The Floor Abrader is the latest in floor abrasion technology, designed and innovated to micro-abrade factory-finished and site-installed floors. The FA-8 is designed to abrade all types of factory-finished floors.

Its tools-free quick change multi-brush design gives the FA-8 built-in versatility while its easy-to-dismantle three-section body makes it easy to transport and store. Its unique cylindrical-designed brushes allow you to abrade with or against the pattern grain of the floor, making it ideal for parquet, herring bone, distressed and hand-scraped flooring. The multiple brush grit offerings allow for various applications including abrading between coats during site finish applications. It's time to say good bye to chemicals. The FA-8 will change the way you think about re-coating floors.

The FA-8 is loaded with features that make this machine perfect for any sanding fleet:

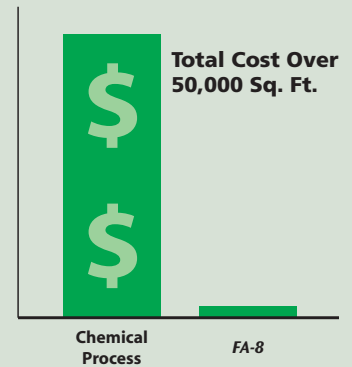

- Operates on 120 V and uses only 8 amps
- Three brush grits for coarse or fine abrading
- Long life brushes with 50,000 square feet of abrading life
- Dismantles into three compact pieces
- Modified belt and pulley make for a smooth and quiet operation
- Cylindrical brush design
- Tools-free quick change brush design
- Designed with a "vacuum-ready" dust pipe
- No need for messy chemical bonding agents

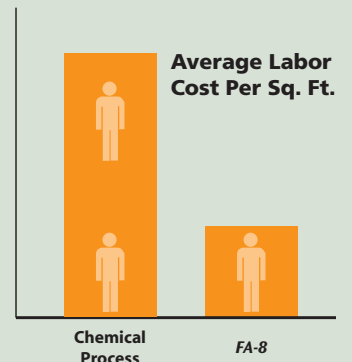

The Complete Alternative Solution:

Why use a four-step chemical process when you can use one abrasive brush for more than 50,000 square feet?

The Floor Abrader's process eliminates added material cost. The brush life is 50,000 square feet, saving the professional as much as \$4,000 in added chemical and related merchandise cost over the life of the brush.

Labor times are reduced by as much as half the time it takes to complete the same work using chemicals. That's an estimated \$3,000 saved over the life of the brush.

Easily dismantles into three parts for storage and transportation.

Tool-free, quick and easy brush change.

No More Chemicals.

The Floor Abrader helps the environment and reduces bodily impact.

- Fewer chemicals introduced into environment
- Reduced odor from chemicals
- Less strain on back and knees

Focusing on product development, increasing productivity, and being environmentally responsible.

The Abrasion Process:

1.

1. See it and believe it.

Start the machine and lower the brush to make contact with the floor, ensuring that the machine is in motion at all times.

2.

2. Tack the floor.

Remove the powder and excess finish dust from the surface and seams of the floor. Use an absorbent-type cloth and tacking agent.

3.

3. Re-coat the floor.

Using the proper applicator, re-coat the floor with finish and allow it to thoroughly cure.

New Micro-Abrasion Technology

Choosing the right brush.

There are three brush options available. It is recommended to always start with the fine brush.

If the floor is not adequately powdering, use the medium brush. It may be necessary to make a second pass over the entire floor using the fine brush to smooth out the etching.

The coarse brush removes deep embedded scratches from factory finish.

SPECIFICATIONS	FA-8
Part Number	07166A
Abrasive Size	6 in x 7.5 in
Abrasive Rate	950 RPM
Operating Controls	Lever operated
Motor	0.625 hp
Power Cable	50 ft 14-3 abrasion resistant
Voltage/Frequency	115 V / 60 Hz
Amps	8 A
Sound Emissions	66 dB A
Dimensions	21.5 in x 16 in x 35.5 in
Weight	125 lb

Specifications are subject to change without notice.

Abrasive Brush Features & Benefits:

- Quick change for versatility
- Coarse, medium and fine grit
- Color-coded for easy identification
- Symmetrical design for added life
- Abrades through aluminum oxide finishes

Coarse Brush

Removes factory finish
Removes deep
embedded scratches
from factory finish

P/N 30808A

Medium Brush

Etches factory finish
Removes deep
scratches from
factory finish

Use after coarse brush

P/N 38732A

Fine Brush

Abrades factory finish
Use this brush
between finish
coats

Use after med brush
